A microRNA array reveals extensive regulation of microRNAs during brain development

ANNA M. KRICHESKY, KEVIN S. KING, CHRISTINE P. DONAHUE, KONSTANTIN KHRAPKO, and KENNETH S. KOSIK

The authors would like to revise the designation of the microRNAs (miRNAs) listed in Table 1. Since numerous new miRNAs, unavailable at the time of manuscript submission, have been reported by other groups, the miRNAs marked in Table 1 with asterisks (see revised table at right) were assigned by the miRNA Registry with different names than those published in this paper.

In addition, miR-131 is alternatively known in the Rfam database as miR-9*, as it appears to be expressed from the opposite strand of the miR-9 precursor. The sequences quoted in the paper as miR-178 and miR-266 were renamed miR-181a and miR-130b, respectively.

The small RNA referred to as miR-271 does not fulfill the stringent criteria for miRNA suggested by Ambros et al. (2003). [Ambros, V., Bartel, B., Bartel, D.P., Burge, C.B., Carrington, J.C., Chen, X., Dreyfuss, G., Eddy, S.R., Griffiths-Jones, S., Marshall, M., et al. 2003. A uniform system for microRNA annotation. *RNA* 9: 277–279.] Although this molecule is expressed in brain as detected by Northern blot analysis, it may represent a different class of non-coding RNA and, therefore, was deleted from the list of miRNAs included on the array.

The authors apologize for potential confusion in nomenclature that this paper may have caused.

REVISED TABLE 1. List of miRNAs included on the array

miRNA	Sequence (5' to 3')
mir-9	TCTTGGTTATCTAGCTGTATGA
mir-16	TAGCAGCACGTAATATTGGCG
mir-19b	TGTGCAAATCCATGAAAACGTGA
mir-30b	TGTAAACATCCTACACTCAGC
mir-93	AAAGTGCTTCTGTGCAGGTAG
mir-98	TGAGGTAGTAAGTTGTATTGTT
mir-99a	ACCCGTAGATCCGATCTTGT
mir-103	AGCAGCATTGTACAGGGCTATGA
mir-124a	TAAGGCACGCCGTGAATGCCA
mir-125b	TCCCTGAGACCCTAACCTGTGA
mir-127	TCGGATCCGTCTGAGCTTGGCT
mir-128	TCACAGTGAACCGGTCTCTT

mir-351-like	TCCCTGAGAGCCCTTGAGCCTG
mir-351	TCCCTGAGGAGCCCTTGAGCA
mir-130b	CAGTGAATGATGAAAGGGCAT

miRNAs miR-322–miR-351 have been recently cloned from rat neurons by Kim et al. (2003). [Kim, J., Krichevsky, A., Grad, Y., Hayes, G.D., Kosik, K.S., Church, G.M., and Ruvkun, G. 2003. Identification of many microRNAs that copurify with polyribosomes in mammalian neurons. *Proc. Natl. Acad. Sci.* 101: 360–365.] miRNA marked with asterisks (let-7d*, mir-140*, and mir-129*) are expressed from the opposite strand of the corresponding miRNA (let-7d, mir-140, and mir-129) precursors. Similarly, miR-131 is alternatively named miR-9*, as it is expressed from the opposite strand of the miR-9 precursor.
