

Mtg 2: Tue, 5 Jan 10

2-1

2 ways to construct f_n :

- 1) Taylor series
- 2) Int. poly. Interp.

f_n as Taylor series of f :

Example: $I = \int_0^1 \frac{e^x - 1}{x} dx$

$f(x) = \frac{e^x - 1}{x}$ has a removable singularity at $x=0$

HW: Find $\lim_{x \rightarrow 0} f(x)$ as $x \rightarrow 0$.
Plot $f(x)$, $x \in [0, 1]$

Taylor series

$$e^x = \sum_{j=0}^{\infty} \frac{x^j}{j!} = \underbrace{1}_{\frac{x^0}{0!}} + \sum_{j=1}^{\infty} \frac{x^j}{j!}$$
$$e^x - 1 = \sum_{j=1}^{\infty} \frac{x^j}{j!} \quad \frac{x^0}{0!} = \frac{1}{1} \quad (j=0)$$

$$\frac{e^x - 1}{x} = \sum_{j=1}^{\infty} \frac{x^{j-1}}{j!} \quad (1) \quad \underline{2-2}$$

Thm on Taylor Series (A. p. 4, Thm 1.4)
 $f(\cdot)$ at $f^{(n+1)}$ exists and cont.

$$f^{(n+1)}(x) := \frac{d^{n+1}}{dx^{n+1}} f(x) \quad (2)$$

$$f(x) = \underbrace{p_n(x)}_{\text{poly. of order } n} + R_{n+1}(x) \quad (3)$$

$$p_n(x) \equiv f_n(x)$$

(ident. or equiv. to)

$$(4) \quad p_n(x) := f(x_0) + \frac{(x-x_0)}{1!} f^{(1)}(x_0) + \dots + \frac{(x-x_0)^n}{n!} f^{(n)}(x_0)$$

$$(5) \quad R_{n+1}(x) := \frac{1}{n!} \int_{x_0}^x \underbrace{(x-t)^n}_{w(t)} \underbrace{f^{(n+1)}(t)}_{g(t)} dt$$

$$(1) R_{n+1}(x) = \frac{(x-x_0)^{n+1}}{(n+1)!} f^{(n+1)}(\xi) \quad \text{L2-3}$$

for $\xi \in [x_0, x]$.

HW: Find $p_n(x)$ and $R_{n+1}(x)$ of e^x .

Note: (5) p. 2-2 $\uparrow$ (1) p. 2-3
int. mean value thm $\equiv$ IMVT

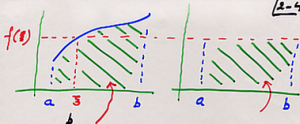

Int. Mean Value Thm (IMVT)

$$\int_a^b w(x) f(x) dx = f(\xi) \int_a^b w(x) dx$$

with $\underbrace{w(x) \geq 0 \quad \forall x \in [a, b]}_{w(\cdot) \text{ is non-neg.}}$.

Special case: $w(x) = 1 \quad \forall x \in [a, b]$

$$\int_a^b f(x) dx = f(\xi) \underbrace{(b-a)}_{\int_a^b 1 dx}$$

$$\int_a^b f(x) dx = f(c)(b-a)$$

$f(\cdot)$ cont. on $[a, b]$

$$m \leq f(x) \leq M \quad \forall x \in [a, b]$$

$$\min_x f(x)$$

$$\max_x f(x)$$

$$\Rightarrow \underbrace{\int_a^b m dx}_{m(b-a)} \leq \int_a^b f(x) dx \leq \underbrace{\int_a^b M dx}_{M(b-a)}$$

$\exists c \in [a, b]$ st $m(b-a) \leq f(c)(b-a) \leq M(b-a)$
 "there exists"
