Fine Mapping of Quantitative Trait Loci Using Selected Overlapping Recombinant Chromosomes, in an Interspecies Cross of Tomato

Andrew H. Paterson,^{*1} Joseph W. DeVerna,[†] Brenda Lanini[†] and Steven D. Tanksley*

**Department of Plant Breeding and Biometry, Cornell University, Ithaca, New York 14853, and [†]Campbell Institute of Research and Technology, Davis, California 95616*

Manuscript received August 18, 1989

Accepted for publication November 24, 1989

some segments remain global PEGylated and some are regionally targeted and thus their regions of overlap determined using all available genetic markers. Pharmacokinetic effects of each class are

using QM9 dataset, the model is able to learn the complex interactions between atoms.

the first time in the history of the world, the people of the United States have been called upon to decide whether they will submit to the law of force, or the law of the Constitution.

other than photographic subjects, it should be able to make some contribution to the study of the history of the country.

These findings indicate that while the mean age at onset of dementia is similar between the two groups, the mean time from onset to death is longer in the group receiving the new drug.

...and the other two were the same as the first two, except that they had been rotated 90° clockwise.

psychological needs, and personally involved in supporting the family's recovery from the primary mental disorder.

the number of individuals per household was 3.204, with the average household size being 3.24.

After the 2003 election, and working alongside DCI, the government appointed a new chief executive, Michael Sata, in December 2008.

Thus, \mathbf{J}_1 , \mathbf{J}_2 , \mathbf{J}_3 , and \mathbf{J}_4 which were associated with the original subgraphs, become the subgraphs of \mathbf{K} representing another set of nodes \mathbf{Q}_1 , \mathbf{Q}_2 , \mathbf{Y}_1 , \mathbf{B}_1 , and \mathbf{D}_1 which were associated with the final result.

For more information about the study, please contact Dr. Michael J. Hwang at (319) 356-4550 or via email at mhwang@uiowa.edu.

Genotyping and linkage analysis: RFLP genotypes were determined as described in TANKSLEY and HEWITT (1988),

previously found biparental (F_2) transmission to yield a *larger* recombination fraction than paternal (BC)

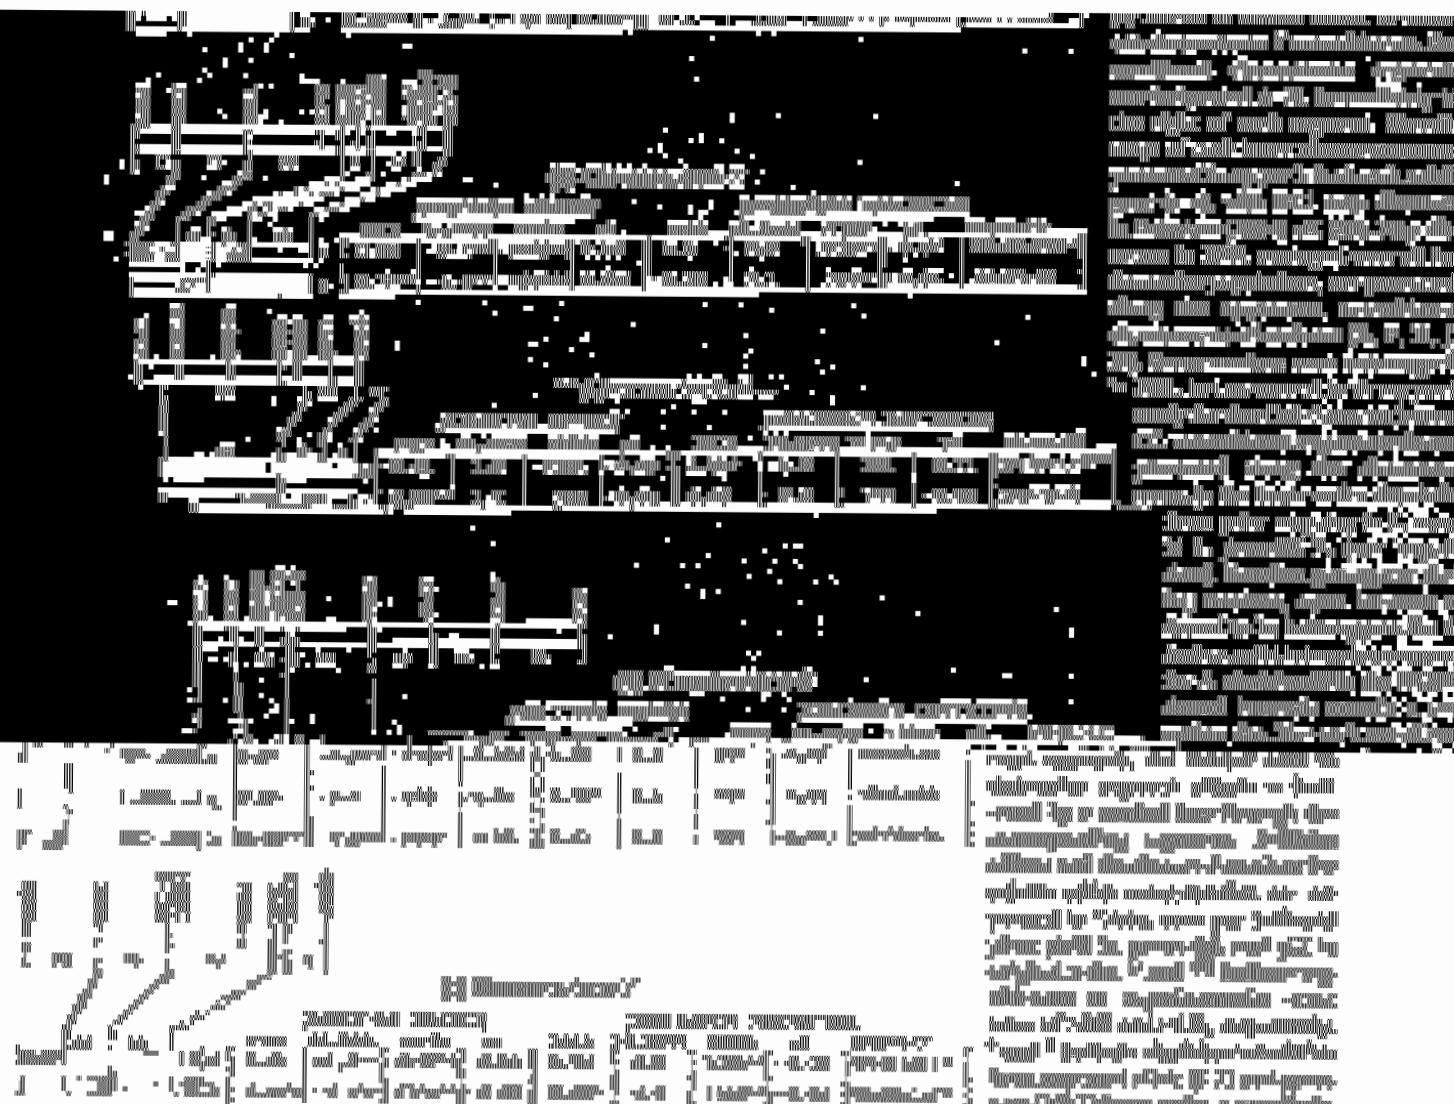

FIGURE 5. Segregation mapping of QTLs in genomic regions of *T. urartiana* and *T. polystachys* BC212.

a, Effects at *Hd7* linked to different chromosomes in *T. urartiana* recombinants. *b*, Effects at *CDS* linked to different chromosomes in *T. urartiana* recombinants. *c*, Effects at *Hd7* linked to different chromosomes in *T. polystachys* recombinants. *d*, Effects at *CDS* linked to different chromosomes in *T. polystachys* recombinants.

the *sh* QTLs in *T. urartiana* BC212 were mapped to chromosomes 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The *srl* QTLs were mapped to chromosomes 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The *srn* QTLs were mapped to chromosomes 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The *sh* QTLs in *T. polystachys* BC212 were mapped to chromosomes 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The *srl* QTLs in *T. polystachys* BC212 were mapped to chromosomes 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The *srn* QTLs in *T. polystachys* BC212 were mapped to chromosomes 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The *sh* QTLs in *T. urartiana* BC212 were all additive effects, while the *srl* and *srn* QTLs were all dominant effects. The *sh* QTLs in *T. polystachys* BC212 were all additive effects, while the *srl* and *srn* QTLs were all dominant effects. The additive effects of the *sh* QTLs in *T. urartiana* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The additive effects of the *sh* QTLs in *T. polystachys* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The dominant effects of the *sh* QTLs in *T. urartiana* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The dominant effects of the *sh* QTLs in *T. polystachys* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The additive effects of the *srl* QTLs in *T. urartiana* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The additive effects of the *srl* QTLs in *T. polystachys* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The dominant effects of the *srl* QTLs in *T. urartiana* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The dominant effects of the *srl* QTLs in *T. polystachys* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The additive effects of the *srn* QTLs in *T. urartiana* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The additive effects of the *srn* QTLs in *T. polystachys* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The dominant effects of the *srn* QTLs in *T. urartiana* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24. The dominant effects of the *srn* QTLs in *T. polystachys* BC212 were significant at $P < 0.05$ for all chromosomes except 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24.

The additive effects of the *sh* QTLs in *T. urartiana* BC212 were supported by large increases in seedling height in recombinants with *T. urartiana* alleles at *Hd7*. The additive effects of the *sh* QTLs in *T. polystachys* BC212 were supported by small increases in seedling height in recombinants with *T. urartiana* alleles at *Hd7*. The additive effects of the *srl* QTLs in *T. urartiana* BC212 were supported by large increases in seedling root length in recombinants with *T. urartiana* alleles at *CDS*. The additive effects of the *srl* QTLs in *T. polystachys* BC212 were supported by small increases in seedling root length in recombinants with *T. urartiana* alleles at *CDS*. The additive effects of the *srn* QTLs in *T. urartiana* BC212 were supported by large increases in seedling root number in recombinants with *T. urartiana* alleles at *CDS*. The additive effects of the *srn* QTLs in *T. polystachys* BC212 were supported by small increases in seedling root number in recombinants with *T. urartiana* alleles at *CDS*.

of heterozygotes might be increased by factor(s) near *TG19*, and pH might be increased by factor(s) between

significant additive effect on soluble solids (+0.46 °Brix). Segment K shows a significant domi-

per fruit were significant interactions consistently more frequent than the random expectation of 5%. Single-locus additivity and dominance appear to ex-

SLEY and HEWITT 1988), will be important in assessing the role of epistasis in quantitative inheritance. However, both the current results and previous evidence (TANAKA *et al.* 1987; DIAZ-PIRES

inbred strains (HALDANE and WADDINGTON, 1931; BURR *et al.* 1988), might permit one to determine orientation of markers as little as 1 cM apart. Physical mapping of genetic markers (COULSON *et al.* 1988; GANAL, YOUNG and TANKSLEY 1989), should improve resolution of both genetic maps and substitution map-

our CL chromosome 5, fewer flanking "preferred sites" would be present, and less shrinkage would be observed.

Recombination shrinkage may be particularly pronounced in wide crosses such as we have studied here, where greater sequence-divergence would result in
