

Z. Justinova *et al.*
Effects of fatty acid amide hydrolase (FAAH) inhibitors in non-human primate models of
nicotine reward and relapse

Supplementary Figure S3. Reinstatement of extinguished THC seeking behavior by priming injections of THC (0.04 mg/kg, IV), but not by vehicle (0 mg/kg) or URB694 (0.3 or 1 mg/kg, IV 30 minutes before the session). Lever presses produced over 1-h session (A) and overall rates of responding (B) are shown. Bars represent mean \pm SEM ($n=3$). * $p < 0.05$, ** $p < 0.01$, *post-hoc* vs. 'vehicle + vehicle priming' condition, Tukey test.
