CURRENT SURGICAL ENDOSCOPY

Aims & Scope

The aim of Current Surgical Endoscopy is to promote excellence in the practice of endoscopic surgery and clinical research. Current Surgical Endoscopy is an international peer-reviewed, multi-disciplinary journal for physicians, clinicians, and scientists with interest in endoscopic surgery in orthopedics, neurological and spinal surgery, gastroenterology, otolaryngology, and interventional pain management. Current Surgical Endoscopy publishes reports of original research, guidelines, narrative and systematic reviews, and commentaries on a broad range of topics. Current Surgical Endoscopy is most interested in manuscripts that will influence current clinical practice and address important advances in the clinical application of endoscopic surgery techniques. Areas of interest cover, but are not limited to:

- Biomedical imaging & biomechanics
- Clinical applications of endoscopy to improve patient care and outcomes
- Clinical trials illustrating the use of endoscopic surgery techniques
- Conceptual and structural characterization of endoscopic systems
- Imaging & visualization of diseases and clinical entities
- Methodologies & preclinical and clinical applications of endoscopy
- Novel techniques & approaches for the advancement of endoscopy
- Translational research with technology transfer applications in endoscopy
