Aims & Scope

Current Topics in Medicinal Chemistry is a forum for the review of areas of keen and topical interest to medicinal chemists and others in the allied disciplines. Each issue is devoted to a specific topic of research which provides the reader with comprehensive reviews on the current state of the art. The scope of Current Topics in Medicinal Chemistry will cover all areas of medicinal chemistry, including: current developments in rational drug design, synthetic chemistry, medicinal chemistry, compound diversity measurements, drug discovery, natural products, pharmacology, and related areas. The study of how structure and function are related is absolutely essential to understanding the molecular basis of life. Current Topics in Medicinal Chemistry aims to contribute to the development of new therapeutic agents for the treatment of human disorders. The journal is essential reading for medicinal chemists who wish to be kept informed and up-to-date with the latest developments in medicinal chemistry.
