Title: Citrus limonoids and curcumin additively inhibit human colon cancer cells

Authors: K. N.C. Murthy, G. K Jayaprakasha and B. S Patil

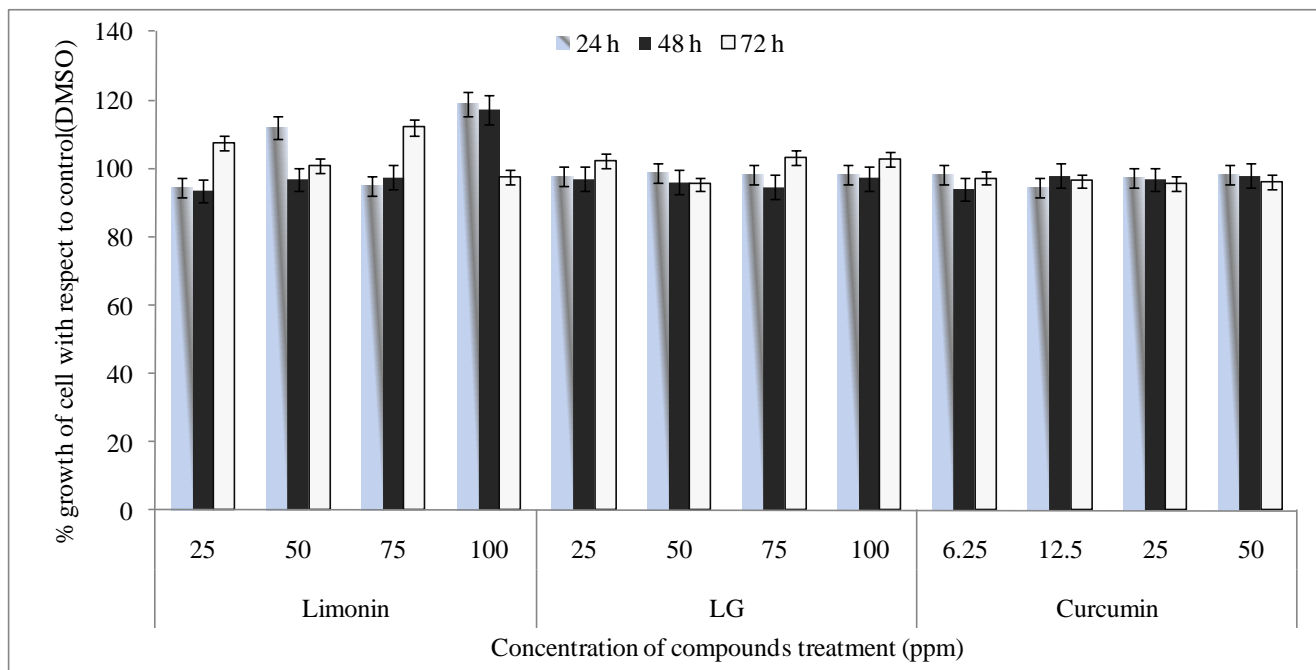

Fig. S1- Effect of limonin, LG and curcumin on proliferation of 112CoN cells measured by MTT assay. Cells were treated with the specified concentrations of compounds for 24, 48 and 72 h and amount of viable cells were spectrophotometrically estimated using MTT reagent. Results were expressed in % growth of cells compared to vehicle (DMSO) treated cells. There was no significance in differences in the % cell growth with samples treated compared to control (DMSO treated)
